

FIRE and PPP (and vice-versa)

Observations

- Future Internet research requires experimental platforms
 - Platforms have a limited time life
 - Federated by GEANT
- It is not the job of research to maintain platforms!
- PPP is not about research, but innovation and integration
 - PPP should make an operational core platform available quickly
 - Cloud based
 - Common API for querying any kind of data (see next slide)
 - Management and some common services probably need to be provided

The PPP should support FIRE

- Platform evolution and sustainability
- Access to the PPP core platform for researchers

Core infrastructure
