TEFIS

Role of FIRE projects in FI PPP

Julie Marguerite
THALES

FIRE synergies with FI PPP

- Support an approach combining Living Labs experimentation, FIRE testbed facilities and simulation together
 - Simulation can be used to carry out 'what if' experiments
 - Living labs to involve users in the design
 - Trials in large scale real-life conditions
- FIRE
 - Re-use rather than re-build
 - Bridge the gap
 - Access to a set of experimentation facilities
 - Networking
 - Cloud computing to support simulation and services testing
 - Open calls

From a TEFIS standpoint

- TEFIS goal is to provide a portal as a single access point to run experiment remotely combining heterogeneous testbeds.
- Support service development lifecycle
- Be use case driven
- Provide an open framework that will allow efficient combination of various facilities
 - Could be instanciated for PPP use cases and core platform testing
 - Access to EU and national testbeds
 - Access to FIRE and Living lab resources
 - Cloud resources for simulation
